# Click here to expand

- (1) Clients that do not support Forward Secrecy (FS) are excluded when determining support for it.
- $(2) \ No \ support \ for \ virtual \ SSL \ hosting \ (SNI). \ Connects \ to \ the \ default \ site \ if \ the \ server \ uses \ SNI.$
- (3) Only first connection attempt simulated. Browsers sometimes retry with a lower protocol version.
- (R) Denotes a reference browser or client, with which we expect better effective security.

# Not simulated clients (Protocol mismatch)

- (All) We use defaults, but some platforms do not use their best protocols and features (e.g., Java 6 & 7, older IE).
- (All) Certificate trust is not checked in handshake simulation, we only perform TLS handshake.
